The Matti **Orion** folding system provides a simple, proven method of generating continuous folded output from digital printers or any other continuous device.

The Buffer Table and Fast Forward accessories allows fan folded documents to be accumulated in large volumes without interrupting the operation of the folder.

The fast forward function rapidly advances the shingled documents into the vertical stacker when desired volume is reached. This creates a space on the buffer table, which will be filled by the continuous operation of the folder as it folds the printed documents.

Main Features

- Allows a high volume of documents to be stored in the folder.
- Increases folder and printer up-time.
- The fast forward function reduces operator intervention.
- Reduces operator stack manipulation
- Minimises potential repetitive strain injuries.

Model

CF20/BT

Vertical Stacker

High Pile Stacker
Turner

Benefits

- Reduces operator intervention.
- Minimises printer down time
- Increase storage capacity of the folding system
- Field up-gradable.
- Trouble free operation.

Optional Features

- 150 mtr Versions
- Pinless or Pinned processing
- Extension conveyor.
- Vertical Stacking Table
- Mobile document transporter.
- High pile stacker turners
- FIFO "First in First out" unit.
- Document pallets

Matti **Orion** PRODUCT RANGE

Unwinders
Rewinders
