The Matti **Orion** folding system provides a simple, proven method of generating continuous folded output from digital printers or any other continuous device.

The Vertical Stacking Table allows the shingled delivery from the folder to be stacked in a vertical pack which facilitates a safe and easy transportation of the stack to its next operation.

As the pile height increases in the stacker the table automatically lowers. When the desired number of documents have been loaded, the dolly can be easily removed with a stack truck and pushed to its next process.

Main Features

- Allows a high volume of documents to be stacked.
- Increases folder and printer up-time.
- Automatic loading.
- Reduces operator stack manipulation
- Minimises potential repetitive strain injuries.
